8. HEALTH HAZARD DATA

EYE CONTACT:
Moderate Eye Irritation: signs/symptoms can include redness, swelling, pain, tearing, and hazy vision.

No toxicity data for the solution. Ammonium perfluoroalkanoates can be irritating to the eye and may cause eye injury from airborne exposure.

SKIN CONTACT:
Mild Skin Irritation (after prolonged or repeated contact): signs/symptoms can include redness, swelling, and itching.

May be absorbed through the skin and persist in the body for an extended time.

No toxicity data for the solution. Some ammonium perfluoroalkanoates are slightly toxic when absorbed through the skin.

INHALATION:
May be absorbed by inhalation and persist in the body for an extended time.

No toxicity data for the solution. Some ammonium perfluoroalkanoates

Abbreviations: N/D - Not Determined N/A - Not Applicable
can be considered moderately toxic by inhalation on a single exposure; a median lethal concentration for a 4-hour exposure in the albino rat is 990 milligrams per cubic meter. Single overexposure, above recommended guidelines, may cause:

Irritation (upper respiratory): signs/symptoms can include soreness of the nose and throat, coughing and sneezing.

Prolonged or repeated overexposure, above recommended guidelines, may cause:

Liver Effects: signs/symptoms can include yellow skin (jaundice) and tenderness of upper abdomen.

IF SWALLOWED:

Ingestion is not a likely route of exposure to this product.

No toxicity data for the solution. A mixture of ammonium perfluoroalkanoates was moderately toxic in albino rats from a single oral exposure; acute oral LD50 (rat) is 540 mg. per kg. of body weight.

CANCER:

WARNING: Contains a chemical which can cause cancer. (3803-26-1) (1983 and 1993 studies conducted jointly by 3M and DuPont).

MUTAGENICITY:

A mixture of ammonium perfluoroctanoate, ammonium perfluorooctanoate, ammonium perfluorobutanoate and ammonium perfluorohexanoate was not mutagenic in in vitro mutagenicity assays. The mixture did not cause cell transformation in a mammalian cell transformation assay.

REPRODUCTIVE/DEVELOPMENTAL TOXINS:

A mixture of ammonium perfluoroctanoate, ammonium perfluorooctanoate, ammonium perfluorobutanoate and ammonium perfluorohexanoate was not teratogenic in rabbits by oral administration and was not teratogenic to rats by gavage and inhalation exposures.
